DWT

Dieter Wegener
Manager

Your communicative link between research facilities and industry.

With the institution's services it is aimed to increase competitiveness of individual institutions, companies and therefore also of several local areas by developing and employing new technologies.

The institution pursues the realisation of knowledge in the field of environmental technology into marketable production methods, products and services. These services refer to two main areas

Technology projects

Handling of innovative technology projects and their industrial realisation, with the main emphasis on the environmental industry technological transfer, distribution and promotion

Measurements for management, consulting and qualification

Projects for foreign countries (especially Asia/ People's Republic of China)

Services of engineers/project management for plans and projects in the environmental sector (sewage/waste)

Consulting services for SME to develop a market Negotiation/representation of manufacturers creating facilities and products in the sector of environmental technology

Qualification projects and technological transfer

DWT

Innovative technology projects in cooperation with further SME's and research facilities and companies, in particular in the field of environmental technologies and chemical process technologies.

The main emphasis is on environmental technologies, environmental chemistry, environmental analytics processes of recycling and technologies for waste and remnants (plastics, building rubble, biological waste, industrial waste)

- Solutions for the industry of sewage treatment
- Development of chemical and chemical-physical processes
- Remediation of soil, water, air
- Utilisation of renewable raw materials
